Strindheim  
via Brundalen

Project aim

- To enable Trøndelag county and AtB to assess whether electric roads are a feasible alternative for buses in Trondheim from 2029
- To spread knowledge about the technology among bus operators, bus manufacturers, public authorities and other possible users

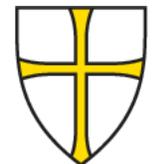

Project owner Trøndelag county

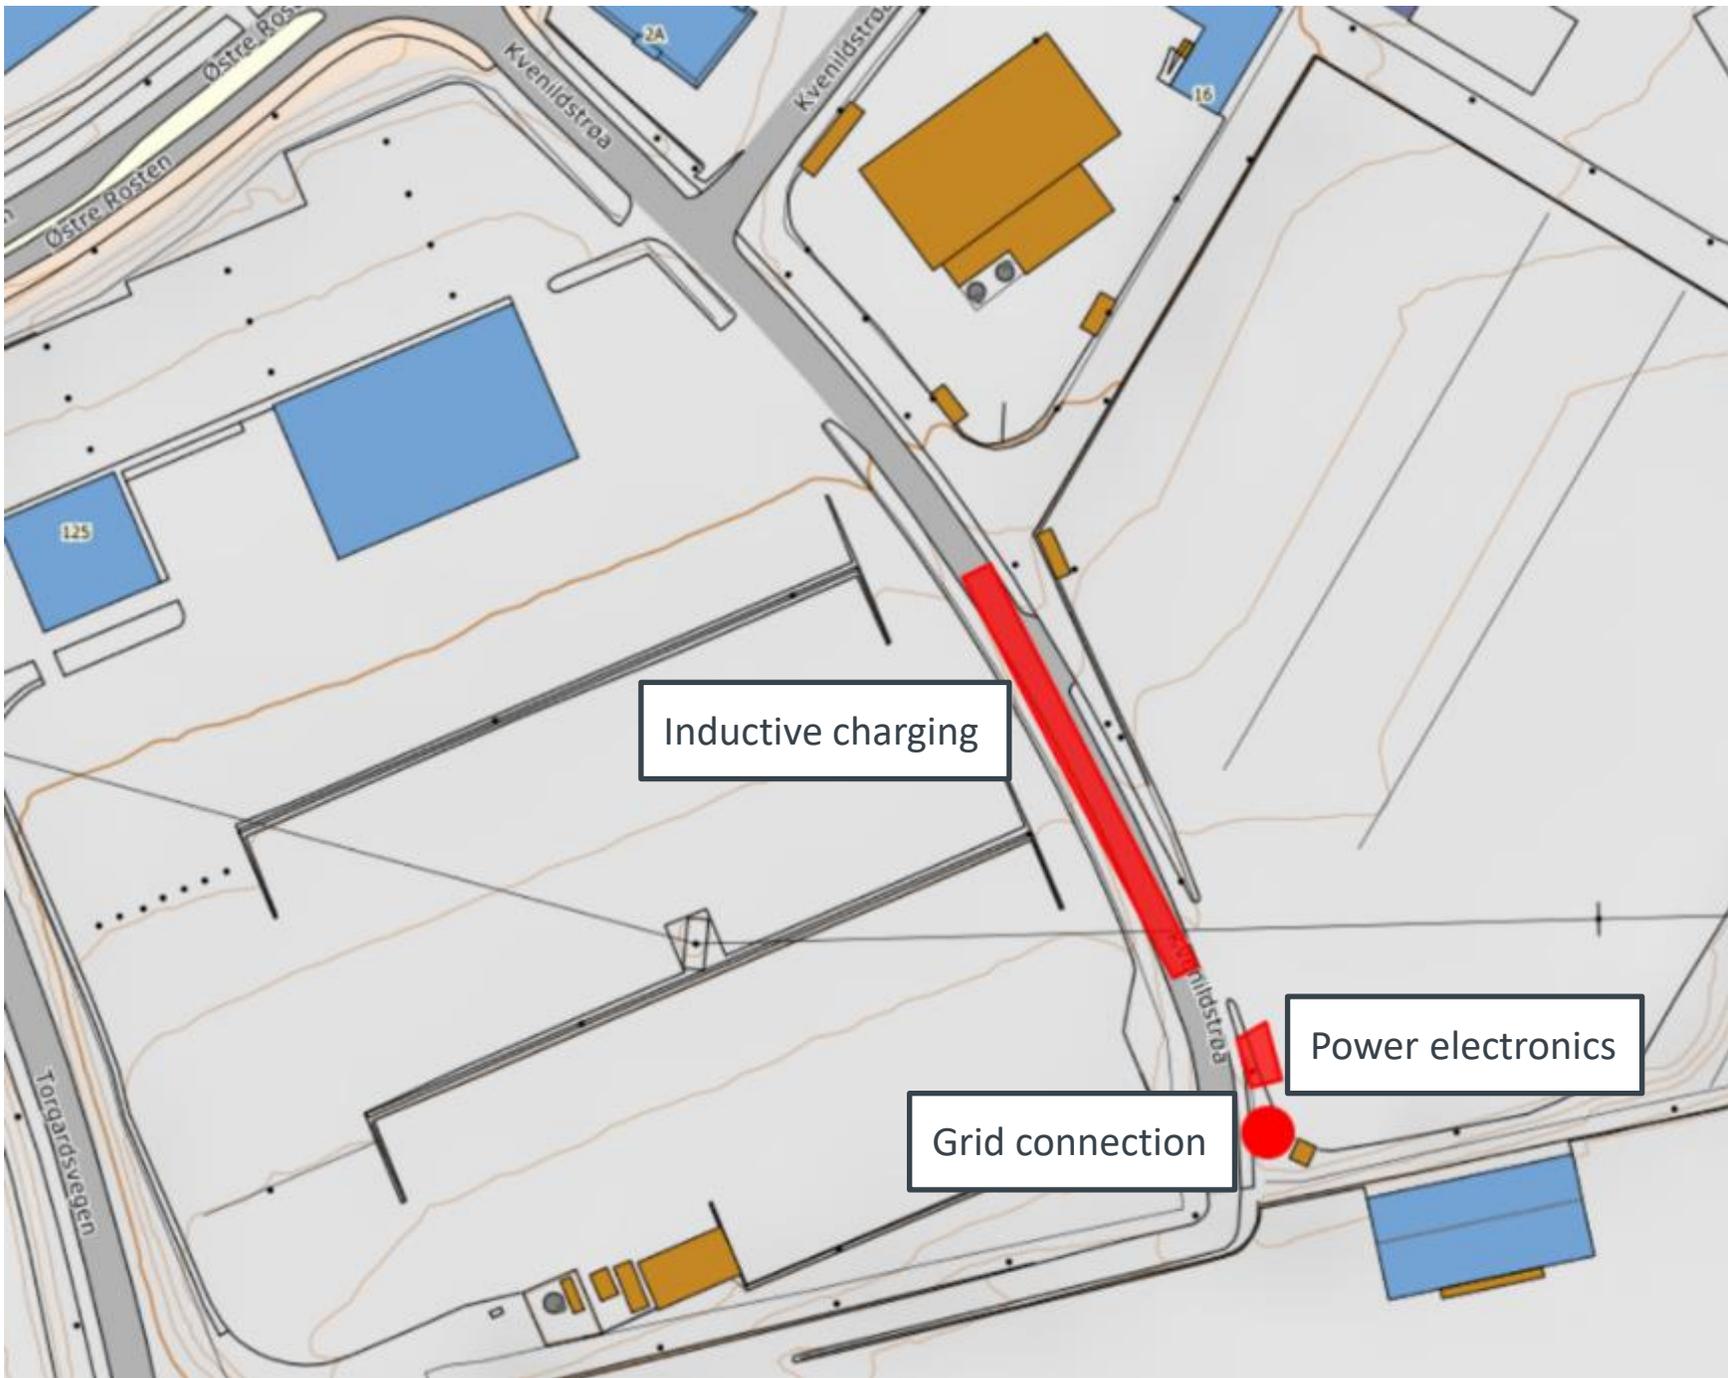

Project manager AtB

Other involved parties SINTEF, Norwegian Public Roads Administration, Trondheim municipality, bussoperators etc.

Budget ~ 25 mNOK

Project period 2022 - 2025

Inductive charging

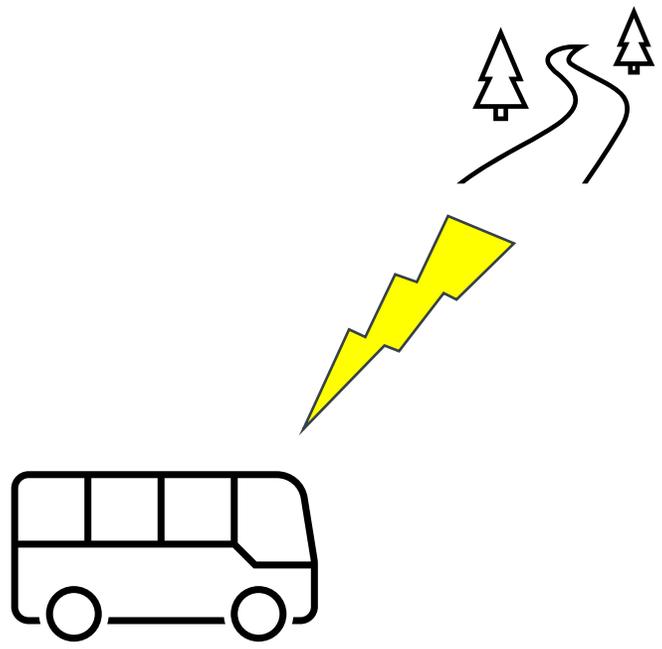

Grid connection

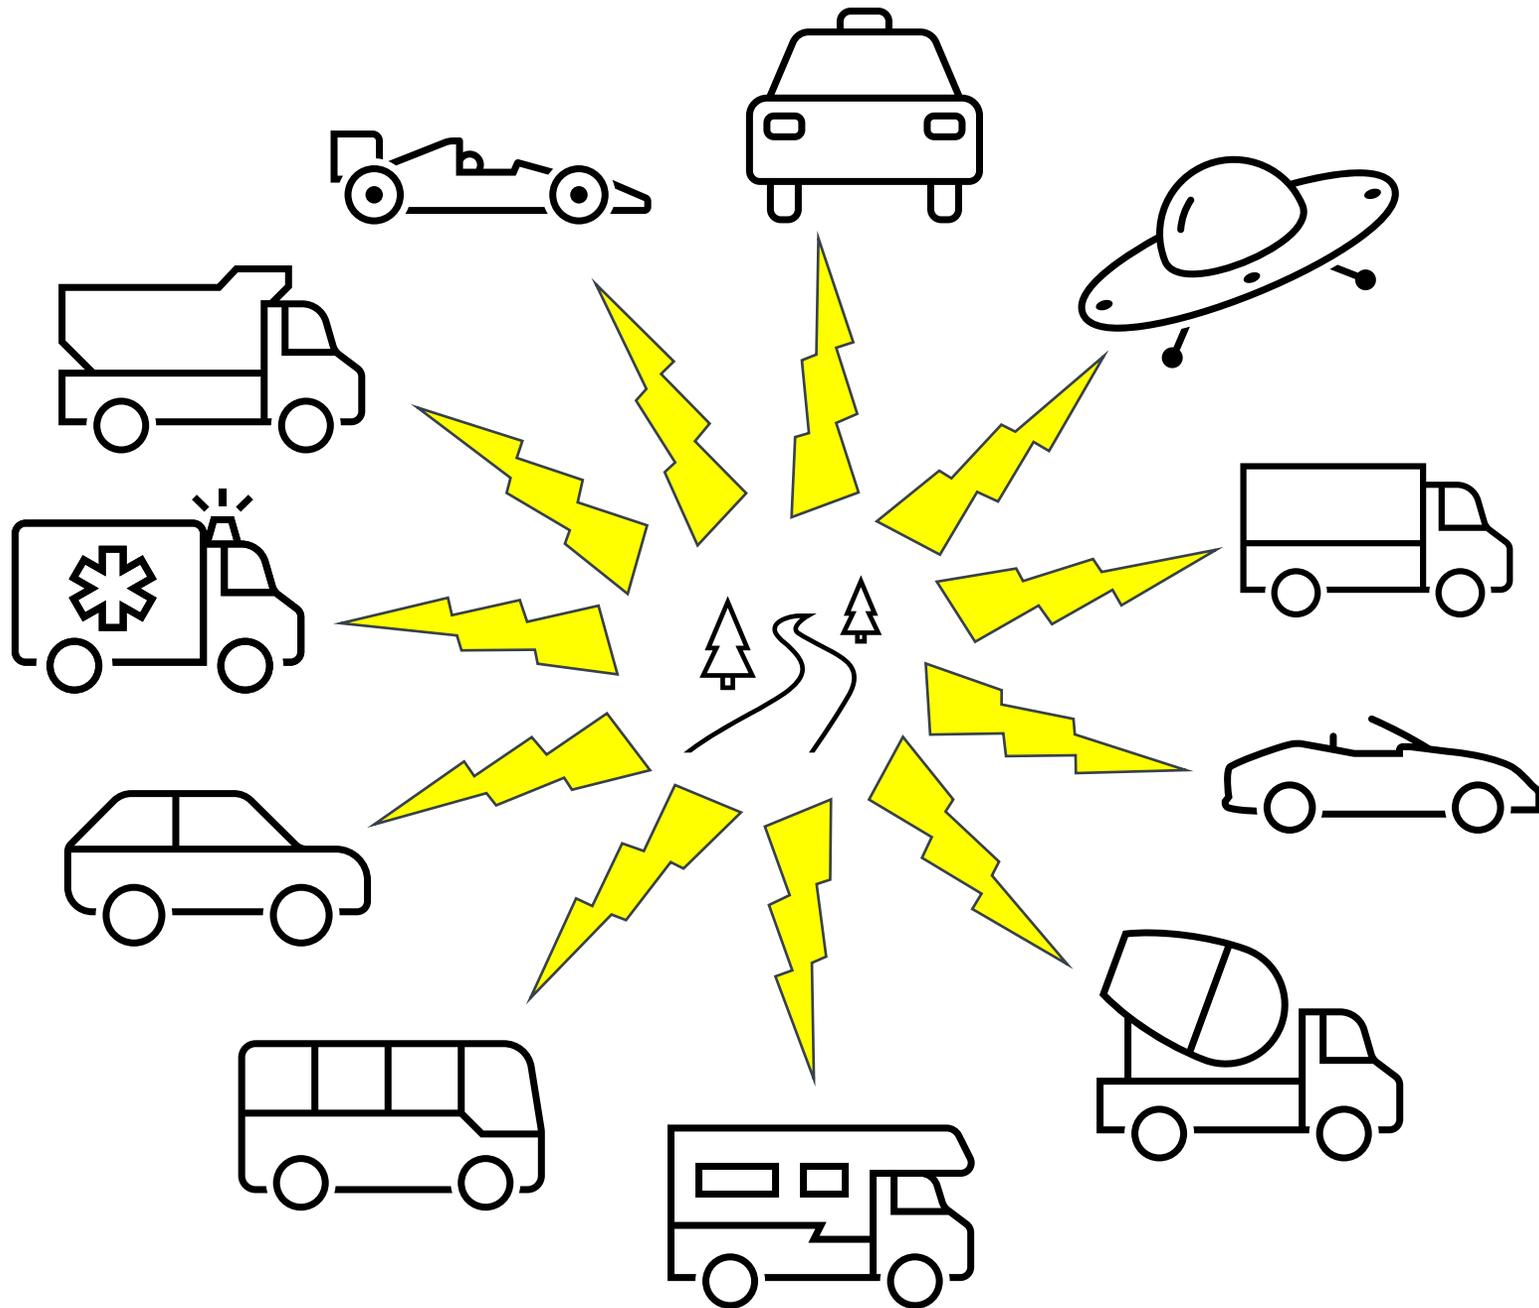

Power electronics

Procurment												
Delivery time												
Construction and commissioning												
Piloting												
Evaluation												

- How will an electric road be received by “the common people”?
- How can we succeed in attracting more types of users than buses?
- Which business and ownership models are suitable for electric roads with multiple types of users?
- How can an electric road supplement the establishment of ordinary charging infrastructure for EVs?
- What opportunities can electric roads provide in a future with autonomous vehicles?
